

# Piston Displacement Lesson 3 Worksheet

Name

Key

Solve the following using the cubic inch displacement formula and then convert to the indicated unit. Show work and use appropriate units.

1. A V-6 engine block has a bore of 3 inches, a stroke of 4 inches. Calculate the cubic inch displacement in cubic inches. If the engine is modified with a .75 increase in the stroke, what is the increase in the CID.

$$CID = .7854 \times 3^2 \times 4 \times 6$$

$$CID = 170 \text{ cubic inches}$$

$$\text{New Stroke} = 4 + .75 = 4.75 \text{ inches}$$

$$\text{Modified CID} = .7854 \times 3^2 \times 4.75 \times 6$$

$$\text{Modified CID} = 201 \text{ cubic inches}$$

$$CID \text{ increase} = 201 - 170$$

$$CID \text{ increase} = 31 \text{ cubic inches}$$

2. A V-6 engine block has a bore of 3.25 inches, a stroke of 3 inches. Calculate the cubic inch displacement in Liters. If the engine's bore is increased to 3.5 inches, what is the change in the CID in Liters?

$$CID = .7854 \times 3.25^2 \times 3 \times 6$$

$$CID = 149 \text{ cubic inches}$$

$$149 \text{ in}^3 \cdot \frac{16.39 \text{ cc}}{1 \text{ in}^3} \cdot \frac{1 \text{ L}}{1000 \text{ cc}} = 2.4 \text{ L}$$

$$\text{New Bore} = 3.5 \text{ in}$$

$$\text{New CID} = .7854 \times 3.5^2 \times 3 \times 6$$

$$\text{New CID} = 173 \text{ cubic inches}$$

$$173 \text{ in}^3 \cdot \frac{16.39 \text{ cc}}{1 \text{ in}^3} \cdot \frac{1 \text{ L}}{1000 \text{ cc}} = 2.8 \text{ L}$$

$$\text{Change in CID} = 2.8 - 2.4 = .4 \text{ L}$$

3. A 4-cylinder engine block has a bore of 4.05 inches, a stroke of 3.25 inches. Calculate the cubic inch displacement in cubic centimeters. If the bore is increased to 4.15 inches and the stroke is increased to 3.5 inches, what is the increase in the CID in cubic centimeters?

$$CID = .7854 \times 4.05^2 \times 3.25 \times 4$$

$$CID = 167 \text{ cubic inches}$$

$$167 \text{ in}^3 \cdot \frac{16.39 \text{ cc}}{1 \text{ in}^3} = 2737 \text{ cc}$$

$$\text{New Bore} = 4.15 \text{ in}$$

$$\text{New Stroke} = 3.5 \text{ in}$$

$$\text{New CID} = .7854 \times 4.15^2 \times 3.5 \times 4$$

$$\text{New CID} = 189 \text{ cubic inches}$$

$$189 \text{ in}^3 \cdot \frac{16.39 \text{ cc}}{1 \text{ in}^3} = 3098 \text{ cc}$$

$$CID \text{ increase} = 3098 - 2737$$

$$361 \text{ cc}$$

4. A V-6 engine block has a bore of 4.03 inches, a stroke of 3.125 inches. Calculate the cubic inch displacement in Liters. If the bore is increased by .05 inches, calculate the new CID in Liters.

$$CID = .7854 \times 4.03^2 \times 3.125 \times 6$$

$$CID = 239 \text{ cubic inches}$$

$$239 \text{ in}^3 \cdot \frac{16.39 \text{ cc}}{1 \text{ in}^3} \cdot \frac{1 \text{ L}}{1000 \text{ cc}} = 3.9 \text{ L}$$

$$\text{New Bore} = 4.03 + .05 = 4.08 \text{ in}$$

$$\text{New CID} = .7854 \times 4.08^2 \times 3.125 \times 6$$

$$\text{New CID} = 245 \text{ cubic inches}$$

$$245 \text{ in}^3 \cdot \frac{16.39 \text{ cc}}{1 \text{ in}^3} \cdot \frac{1 \text{ L}}{1000 \text{ cc}} = 4 \text{ L}$$

$$4 \text{ L}$$

5. An 8-cylinder engine block has a bore of 3.75 inches, a stroke of 3.5 inches. Calculate the cubic inch displacement in Liters. If the engine is modified to a bore of 4 inches, what is the increase in the CID in Liters?

$$CID = .7854 \times 3.75^2 \times 3.5 \times 8$$

$$CID = 309 \text{ cubic inches}$$

$$309 \text{ in}^3 \cdot \frac{16.39 \text{ cc}}{1 \text{ in}^3} \cdot \frac{1 \text{ L}}{1000 \text{ cc}} = 5.1 \text{ L}$$

$$\text{New Bore} = 4 \text{ in}$$

$$\text{New CID} = .7854 \times 4^2 \times 3.5 \times 8$$

$$\text{New CID} = 352 \text{ cubic inches}$$

$$352 \text{ in}^3 \cdot \frac{16.39 \text{ cc}}{1 \text{ in}^3} \cdot \frac{1 \text{ L}}{1000 \text{ cc}} = 5.8 \text{ L}$$

$$\text{CID increase} = 5.8 \text{ L} - 5.1 \text{ L} = \boxed{.7 \text{ L}}$$

6. A 6-cylinder engine block has a bore of 4 inches, a stroke of  $3\frac{3}{8}$  inches. Calculate the cubic inch displacement in Liters. If the stroke is increased by  $\frac{1}{4}$  inch, what is the increase in the CID in Liters?

$$CID = .7854 \times 4^2 \times 3\frac{3}{8} \times 6$$

$$CID = .7854 \times 16 \times 3.375 \times 6$$

$$CID = 254 \text{ cubic inches}$$

$$254 \text{ in}^3 \cdot \frac{16.39 \text{ cc}}{1 \text{ in}^3} \cdot \frac{1 \text{ L}}{1000 \text{ cc}} = 4.2 \text{ L}$$

$$\text{New CID} = .7854 \times 4^2 \times 3\frac{5}{8} \times 6$$

$$\text{New CID} = .7854 \times 16 \times 3.625 \times 6$$

$$\text{New CID} = 273 \text{ cubic inches}$$

$$273 \text{ in}^3 \cdot \frac{16.39 \text{ cc}}{1 \text{ in}^3} \cdot \frac{1 \text{ L}}{1000 \text{ cc}} = 4.5 \text{ L}$$

$$\text{CID increase} = 4.5 - 4.2$$

$$\boxed{.3 \text{ L}}$$

$$\text{New Stroke} = 3\frac{3}{8} + \frac{1}{4} = \frac{27}{8} + \frac{1 \cdot 2}{4 \cdot 2} = \frac{27}{8} + \frac{2}{8} = \frac{29}{8} \text{ or } 3\frac{5}{8}$$

7. A V-8 engine block has a bore of 4.5 inches, a stroke of  $3\frac{1}{2}$  inches. Calculate the cubic inch displacement in cubic inches. If the stroke is increased by  $\frac{1}{2}$  inch and the bore is increased by .125 inches, what is the increase in the CID in cubic inches?

$$CID = .7854 \times 4.5^2 \times 3.5 \times 8$$

$$CID = 445 \text{ cubic inches}$$

$$\text{New Stroke} = 3\frac{1}{2} + \frac{1}{2} = 4 \text{ in}$$

$$\text{New Bore} = 4.5 + .125 = 4.625 \text{ in}$$

$$\text{New CID} = .7854 \times 4.625^2 \times 4 \times 8$$

$$\text{New CID} = 538 \text{ cubic inches}$$

$$\text{CID increase} = 538 - 445$$

$$\boxed{93 \text{ cubic inches}}$$

8. A 5.0 Liter V-8 engine is bored from 3.5 to 3.75 inches. The stroke is unchanged. What is the increase in the CID in Liters?

$$5.0 \text{ L} \cdot \frac{1000 \text{ cc}}{1 \text{ L}} \cdot \frac{1 \text{ in}^3}{16.39 \text{ cc}} = 305 \text{ in}^3$$

$$305 = .7854 \times 3.5^2 \times \text{Stroke} \times 8$$

$$305 = 76.9692 \times \text{Stroke}$$

$$\frac{305}{76.9692} = \frac{76.9692 \times \text{Stroke}}{76.9692}$$

$$\text{Stroke} = 4.0 \text{ inches}$$

$$\text{New Bore} = 3.75 \text{ inches}$$

$$\text{New CID} = .7854 \times 3.75^2 \times 4 \times 8$$

$$\text{New CID} = 353 \text{ cubic inches}$$

$$353 \text{ in}^3 \cdot \frac{16.39 \text{ cc}}{1 \text{ in}^3} \cdot \frac{1 \text{ L}}{1000 \text{ cc}} =$$

$$\text{New CID} = 5.8 \text{ L}$$

$$\text{CID increase} = 5.8 - 5.0$$

$$\boxed{.8 \text{ L}}$$
